

## Do you comply with UDI?

If you supply medical devices anywhere in the world, chances are you have to comply with strict regulations

The EU and the US have both published UDI regulations for medical devices. These regulations join a globally harmonised framework for identification of medical devices – enhancing quality of care, patient safety and business processes. Although, they do take similar but different regulatory approaches, with different compliance timescales and different databases for manufacturers to update. This means added complexity and lots of hard work for all involved.

### What is required from the EU MDR?

From 26 May 2020, all medical devices will need to be assigned a unique device identification (UDI) code. Devices which fall under Class III and Class IIa/b will need to have their UDI recorded, indexed, and registered on a central EU database called EUDAMED – the European Database for Medical Devices.

### How can we help you?

The TSC-50 Batch Tracking & GS1 Scanning Module lets you get control of your batch controlled stock, FIFO management and GS1 barcode scanning requirements, all in one module.

### GS1 EAN-128 barcode scanning for healthcare and medical

Our latest update has added EAN-128 barcode scanning to our batch module which allows you to capture the stock code, batch number, expiry date and batch quantity all with a single scan. Saving you time and ensuring data entry errors are a thing of the past.

The TSC-50 Batch Tracking Module assigns a unique barcode number for every batch / expiry combination and displays this information including location and stock quantity in the real time dashboard.

Implementing GS1 standards will enable you to meet these regulatory requirements in addition to making cost savings, harnessing better quality data and improving efficiency throughout your business.

Implementing GS1 standards not only enable your business' compliance with UDI regulations – they are a catalyst for your business to operate more efficiently, save money and better meet the needs of your customers too.

Want to know more? Contact us today and we'll show you how TSC-50 can improve your batch / lot control as part of your stock management improvements.
